/****************************** Questions and Answers ************************************/
Print
'Notes------------------------------------------------------------------------------------
 1) You can use any name you like for you views, but be descriptive and consistent
 2) You can use your working code from assignment 5 for much of this assignment
 3) You must use the BASIC views for each table after they are created in Question 1
-------------------------------------------------------------------------------------------'

-- Question 1 (5% pts): How can you create BASIC views to show data from each table in the database.
-- NOTES: 1) Do not use a *, list out each column!
--        2) Create one view per table!
--        3) Use SchemaBinding to protect the views from being orphaned!
Go

Create View dbo.vCategories
```

```sql
        With SchemaBinding AS
        Select
             dbo.Categories.CategoryID,
             dbo.Categories.CategoryName
        From
             dbo.Categories;
Go

Create View dbo.vProducts
        With SchemaBinding AS
        Select
             dbo.Products.ProductID,
             dbo.Products.ProductName,
             dbo.Products.CategoryID,
             dbo.Products.UnitPrice
        From
             dbo.Products;
Go

Create View dbo.vEmployees
        With SchemaBinding AS
        Select
             dbo.Employees.EmployeeID,
             dbo.Employees.EmployeeFirstName,
             dbo.Employees.EmployeeLastName,
             dbo.Employees.ManagerID
        From
             dbo.Employees;
Go

Create View dbo.vInventories
        With SchemaBinding AS
        Select
             dbo.Inventories.InventoryID,
             dbo.Inventories.InventoryDate,
             dbo.Inventories.EmployeeID,
             dbo.Inventories.ProductID,
             dbo.Inventories.[Count]
        From
             dbo.Inventories;
Go

-- Question 2 (5% pts): How can you set permissions, so that the public group CANNOT select data
-- from each table, but can select data from each view?

Deny Select On dbo.Categories to Public;
Grant Select On dbo.vCategories to Public;
```

```sql
Deny Select On dbo.Products to Public;
Grant Select On dbo.vProducts to Public;

Deny Select On dbo.Employees to Public;
Grant Select On dbo.vEmployees to Public;

Deny Select On dbo.Inventories to Public;
Grant Select On dbo.vInventories to Public;
Go

-- Question 3 (10% pts): How can you create a view to show a list of Category and Product names,
-- and the price of each product?
-- Order the result by the Category and Product!

Create View dbo.vProductsByCategories AS
       Select Top 100000
            C.CategoryName,
            P.ProductName,
            P.UnitPrice
       From vProducts AS P Join vCategories AS C
            On P.CategoryID = C.CategoryID
       Order By C.CategoryName, P.ProductName;
Go

-- Question 4 (10% pts): How can you create a view to show a list of Product names
-- and Inventory Counts on each Inventory Date?
-- Order the results by the Product, Date, and Count!

Create View dbo.vInventoriesByProductsByDates AS
       Select Top 100000
            P.ProductName,
            I.InventoryDate,
            I.[Count]
       From vInventories AS I Join vProducts AS P
            On I.ProductID = P.ProductID
       Order By P.ProductName, I.InventoryDate, I.[Count];
Go

-- Question 5 (10% pts): How can you create a view to show a list of Inventory Dates
-- and the Employee that took the count?
-- Order the results by the Date and return only one row per date!

-- Here is are the rows selected from the view:

-- InventoryDate    EmployeeName
-- 2017-01-01       Steven Buchanan
```

```sql
-- 2017-02-01       Robert King
-- 2017-03-01       Anne Dodsworth

Create View dbo.vInventoriesByEmployeesByDates AS
       Select Distinct Top 100000
            I.InventoryDate,
            [EmployeeName] = E.EmployeeFirstName + ' ' + E.EmployeeLastName
       From vInventories AS I Join vEmployees AS E
            On I.EmployeeID = E.EmployeeID
       Order By I.InventoryDate;
Go

-- Question 6 (10% pts): How can you create a view show a list of Categories, Products,
-- and the Inventory Date and Count of each product?
-- Order the results by the Category, Product, Date, and Count!

Create View dbo.vInventoriesByProductsByCategories AS
       Select Top 100000
            C.CategoryName,
            P.ProductName,
            I.InventoryDate,
            I.[Count]
       From vProducts AS P Join vCategories AS C
            On P.CategoryID = C.CategoryID
            Join vInventories AS I
            On I.ProductID = P.ProductID
       Order By C.CategoryName, P.ProductName, I.InventoryDate, I.[Count];
Go

-- Question 7 (10% pts): How can you create a view to show a list of Categories, Products,
-- the Inventory Date and Count of each product, and the EMPLOYEE who took the count?
-- Order the results by the Inventory Date, Category, Product and Employee!

Create View dbo.vInventoriesByProductsByEmployees AS
       Select Top 100000
            C.CategoryName,
            P.ProductName,
            I.InventoryDate,
            I.[Count],
            [EmployeeName] = E.EmployeeFirstName + ' ' + E.EmployeeLastName
       From vProducts AS P Join vCategories AS C
            On P.CategoryID = C.CategoryID
            Join vInventories AS I
```

```sql
            On I.ProductID = P.ProductID
            Join vEmployees AS E
            On E.EmployeeID = I.EmployeeID
            Order By I.InventoryDate, C.CategoryName, P.ProductName, [EmployeeName];
Go

-- Question 8 (10% pts): How can you create a view to show a list of Categories, Products,
-- the Inventory Date and Count of each product, and the Employee who took the count
-- for the Products 'Chai' and 'Chang'?

Create View dbo.vInventoriesForChaiAndChangByEmployees AS
       Select
            C.CategoryName,
            P.ProductName,
            I.InventoryDate,
            I.[Count],
            [EmployeeName] = E.EmployeeFirstName + ' ' + E.EmployeeLastName
       From vProducts AS P Join vCategories AS C
            On P.CategoryID = C.CategoryID
            Join vInventories AS I
            On I.ProductID = P.ProductID
            Join vEmployees AS E
            On E.EmployeeID = I.EmployeeID
       Where P.ProductName IN ('Chai', 'Chang');
Go

-- Question 9 (10% pts): How can you create a view to show a list of Employees and the Manager who manages them?
-- Order the results by the Manager's name!

Create View dbo.vEmployeesByManager AS
       Select Top 100000
            [Manager] = M.EmployeeFirstName + ' ' + M.EmployeeLastName,
            [Employee] = E.EmployeeFirstName + ' ' + E.EmployeeLastName
       From vEmployees AS E Join vEmployees M
            On E.ManagerID = M.EmployeeID
       Order By [Manager], [Employee];
Go

-- Question 10 (20% pts): How can you create one view to show all the data from all four
-- BASIC Views? Also show the Employee's Manager Name and order the data by
-- Category, Product, InventoryID, and Employee.

```

```sql
Create View dbo.vInventoriesByProductsByCategoriesByEmployees AS
       Select Top 100000
            C.CategoryID,
            C.CategoryName,
            P.ProductID,
            P.ProductName,
            P.UnitPrice,
            I.InventoryID,
            I.InventoryDate,
            I.[Count],
            E.EmployeeID,
            [Employee] = E.EmployeeFirstName + ' ' + E.EmployeeLastName,
            [Manager] = M.EmployeeFirstName + ' ' + M.EmployeeLastName
       From vProducts AS P Left Join vCategories AS C
            On P.CategoryID = C.CategoryID
            Left Join vInventories AS I
            On P.ProductID = I.ProductID
            Left Join vEmployees AS E
